

5. WHERE IS A EURO?

As per usual, the authors of this site, Cvele, Aca and Bojca met that morning at saloon. Seted a little and when was time to pay the bill, waiter says 25 euros. Each of them gave 10 euros. Waiter, as per usual, says that there are no small change back to 5 euros, so he returns to each one of them 1euro, and two kept for himself. So, each one of them paid $10 - 1 = 9$ euros, 9 times 3 = 27, and two that took waiter, $27 + 2 = 29$ euros. Where is 1 Euro?
